

BYPASS FAT 99%

Green Star 99 %
Palmitic Fatty Acid

The use of high C16:0 palmitic fatty acid products is known to increase butterfat percentages by substituting the de novo synthesis of the same at mammary level during milk production. With a naturally high melting point, a high palmitic fatty acid product has an effective ruminal inertness but is generally accepted to be higher in intestinal digestibility when fed as free fatty acids than as triglyceride forms.

PRODUCT DESCRIPTION

The Green Star 99% is a new variant of high palmitic fatty acid rumen bypass fat that is made from freshly produced palm oil fatty acid that still retains a high level of phytonutrients as additional benefits to the product as an important energy source and de novo fatty acids replacer for ruminants. The product has a high crude fat content of 99% minimum with not less than 85% of C16:0 palmitic acids that will assist in the elevation of butterfat content in milk.

COMPOSITION DETAILS

Crude fat	99% minimum
Moisture	1% maximum
Free Fatty Acid	90% minimum
Melting Point	56-60°C
Appearance	Off-white dry micro-prills of about 300 microns.
C16:0 Palmitic acid	85% minimum

DOSAGE

150 to 300 gram per day per Animal

Packing
25kg

GREEN STAR 84

Feed Supplement for
Efficient milk yield

Green Star 84 is a natural mixture of palm oil essence and calcium. It comprises of pure fat that is "energy booster" for the animal by absorbing completely in the body

COMPOSITION DETAILS

PARAMETER	TYPICAL RESULT
Crude Fat	84.12%
Moisture at 105°C	3.72%
Ash at 850°C	12.83%
Crude Fiber	NIL
Net Energy for Lactation (NEL)	5.2 Mcal/kg
Metabolizable Energy (ME)	7.3 Mcal/kg

Fatty Acid Profile

Fatty Acid	Percentage
C12:0 Lauric acid	0.2%
C14:0 Myristic acid	1.2%
C16:0 Palmitic acid	48%
C18:0 Stearic acid	3%
C18:1 Oleic acid	40%
C18:2 Linoleic acid	6%
C18:3 Linolenic acid	1.6%

DOSAGE

Early Lactation 200-300gm/head/day
Mid Lactation 150-200gm/head/day
Late Lactation 150-200gm/head/day

SOLID ENERGY MORE MILK

Green Star 84 carries palm oil fat which is coated with calcium in a way that bypass the rumen without modification and goes to abomasum where the calcium seal is fragmented. The combined fat & calcium is absorbed through the villi of small intestine into the blood boosting the energy level of animal.

- * Fills up "Energy breach".
- * Reproductive Performance is enhanced.
- * Provides strength to the bones.
- * Pre & Post Partum issues are reduced.
- * Boosts the milk production.
